

Svelte: Child to Parent

Parent.svelte

```
<script>
  import Child from "./Child.svelte";

  const onEvent1 = () => {
    console.log("event1 on Child");
  };
</script>

<div>
  <Child on:event1={onEvent1} />
</div>
```

Child.svelte

```
<script>
  import { createEventDispatcher } from "svelte";
  const dispatch = createEventDispatcher();

  const buttonClick = () => {
    dispatch("event1");
  };
</script>

<div>
  <button on:click={buttonClick}>Click</button>
</div>
```
