

Netzwerkkonfiguration mit Netplan

1 Konfigurationsdatei bearbeiten /etc/netplan/01-netcfg.yaml

DHCP

```
network:
  version: 2
  renderer: networkd
  ethernets:
    enp0s3:
      dhcp4: true
```

Statisch

```
network:
  version: 2
  renderer: networkd
  ethernets:
    enp0s3:
      dhcp4: false
      addresses: [10.10.10.2/24, '2001::2/64']
      routes:
        - to: default
          via: 10.0.0.1
        - to: default
          via: "fe80::1"
      nameservers:
        addresses: [8.8.8.8, '2001:4860:4860::8888']
```

2 YAML-Syntax überprüfen

```
yamllint /etc/netplan/01-netcfg.yaml
```

3 Konfiguration anwenden

```
netplan apply
```

4 Konfiguration testen

```
ip addr
```
