

# Python: Zufallsdaten mit Faker

## Installation

```
pip install Faker
```

## Import und Objekt erstellen

```
from faker import Faker
faker = Faker('de_DE')
```

## Zufallsdaten erstellen

```
zufalls_name      = faker.name()      # z.B. Babette Stiffel
zufalls_adresse   = faker.address()    # z.B. Hertrampfgasse 287 \n67678 Wiedenbrück
zufalls_job       = faker.job()        # z.B. Schornsteinfeger
zufalls_text      = faker.text()       # z.B. Minima explicabo omnis rerum alias deleniti ab.
                                                # Libero saepe ea quas consectetur commodi.
                                                # Officiis officia iste.

zufalls_mac_adresse = faker.mac_address() # z.B. c4:96:c9:5e:2f:3e
```
